Parent guide

Measure in equal units

From top: 4 units, 6 units, 3 units. Longest: B. Shortest: C.

A quiet sound notebook

Answers vary. Accept the child's description. A sound source may be a guess, so ask: What is your evidence? A quiet room is a valid observation. Finding three sounds is not required.

The blue ribbon

Huda tested the ribbon to find out whether it was long enough before changing its length. Drawings are open-ended. For measurement, use equal units without gaps or overlaps from the same starting point. No scissors are needed for this activity.

Choose by the child's skill, not age alone. Observation activities take place with an adult in a safe place.
